## RESEARCH INTEREST

---

I have broad interest in **machine learning**, **data mining** and their potential applications to biomedical data. During my doctoral studies, my main research direction is feature evolvable learning which is a novel learning scenario where data features would evolve in open and dynamic environment. I developed a series of algorithms that can effectively deal with this scenario with theoretical guarantees.

In summary, my research interests include:

- **Interpretability**: studying the interpretability of the black-box machine learning models;
- **Feature Evolvable Learning**: studying learning scenarios where data features evolve;
- **Semi-Supervised Learning**: learning both from labeled and unlabeled data;
- **Online Learning**: learning models continuously from online streaming data;
- **Natural Language Processing**: leveraging pre-trained model to understand natural language;
- **Deep Learning**: leveraging deep neural networks to handle complex spatial and temporal data.
